

Project Proposal for CCP.

Project members:

Ali Hasan, CT-098

Hasan Shahir, CT-095,

Muneeb Rehman, CT-092.

Project title: Roman Urdu Input/Output C library.

Project details:

This project aims to create a custom library in the C programming language. It will perform as an alternative to the standard input/output library, but the function calls will be in Roman Urdu.

For instance, *printf(“”)* can be written as *likho(“”)*.

Scope of the project:

This project aims to cover only the basic input/output of the language. Future extensions *may* include more utilities.
